

## CLAIMS (Marked-Up)

What is claimed is:

1.-5. (Canceled)

6. (Currently amended) A unitary construction for use with a drinking container comprising:

~~a clip connected to, and integrally formed with,~~ a drinking container handle; and a clip having  
a clipping portion thereon, said clip being integrally formed with, and solely connected to, said  
handle, and configured such that wherein when said handle is connected with [[a]] the  
drinking container, ~~and said clip~~ clipping portion is biased ~~against~~ toward the drinking  
container body in unstressed condition, but further separable from the container body  
resiliently, if needed, to releaseably retain an article against the container body.

7. (Previously presented) A unitary construction for use with a drinking container as in Claim 6  
wherein said clip is located on the underside of said handle.

8. (Currently amended) A unitary construction for use with a drinking container as in Claim 6  
further comprising a rim ~~connected to, and integrated into,~~ integrally formed with said unitary  
construction and solely connected with said drinking container handle.

9. (Currently amended) A unitary construction for use with a drinking container as in Claim

[[6]] & further comprising[[:] ]

~~a rim, integrally formed with said unitary construction, and, connected with said~~  
~~drinking container handle; and;~~

[[b.]] a cup liner integrally formed with said unitary construction[[,] ] and[[,] ] solely connected  
with said rim.

10.-15. (Canceled)

16. (Currently amended) A drinking container comprising:

[[An]] an insulated vessel body; with a drinking container handle connected with said vessel body; and an article holding clip biased against the outer side of said body and having a clipping portion thereon, said clip being integrally formed with, and solely connected to, said handle and configured such that said clipping portion is biased toward said vessel body in unstressed condition, but further separable from said vessel body resiliently, if needed, to releaseably retain the article against said vessel body.

17. **(Currently amended)** A drinking container ~~comprising:~~ as in Claim 16, wherein said  
~~An insulated vessel body with a drinking container handle and an article holding clip biased~~  
~~against the outer side of said body and is~~ integrally molded as part of said handle.
18. **(Previously presented)** A drinking container as in Claim 16, wherein said clip is formed on the underside of said drinking container handle.
19. **(Currently amended)** A drinking container as in Claim 16 further comprising:  
a container liner and a container rim, both of which are integrally formed with said drinking container handle and said clip, wherein said liner is solely connected with said rim.
20. **(Previously presented)** A drinking container as in Claim 17, wherein said clip is located on the underside of said drinking container handle.
21. **(Currently amended)** A drinking container as in Claim 17 further comprising:  
a container liner and a container rim, both of which are integrally molded with said drinking container handle and said clip, wherein said liner is solely connected with said rim.
22. **(Currently amended)** A drinking container as in Claim 19 further comprising:  
a drinking container base ~~and outer shell~~ connected to the bottom of said liner and the bottom  
of said vessel body.
23. **(Currently amended)** A drinking container as in Claim 21 further comprising:

a drinking container base ~~and outer shell~~ connected to the bottom of said liner and the bottom  
of said vessel body.

24.-26. (Canceled)
